AB - RU2098466 A cleaning composition (I), containing surfactant, dicalcium phosphate, fragrance for foam-detergents and abrasive material, contains the abrasive in the form of spherical particles of conversion chalk of particle size 20-100 μ m, and contains dicalcium phosphate in form of platelet particles of length 20-120 μ m. Ratio of components (in wt.%, calculated as dry weight) is surfactant 8-10, fragrance 0.1, dicalcium phosphate 18-46 and balance conversion chalk.

- USE - For cleaning the surface of metallic and non-metallic kitchenware, table utensils, baths, tiles, ceramic, crystal glass etc.

- ADVANTAGE - (I) has increased cleaning efficiency and additional polishing properties. Cleaning efficiency is 90-98%.
